

Pentadecor 3D laminates are designed to be membrane pressed or vacuum formed to contoured shapes and surface profiles. The 3D forming process eliminates the need for edge banding and visible seams in a wide variety of health care furniture applications. Pentadecor 3DL allows you to design and manufacture healthcare furniture components that are easy to clean, disinfect and maintain.

Pentadecor 3D laminates are naturally hydrophobic and are constructed to withstand the effects of the aggressive cleaners and disinfectants used by healthcare professionals across North America.

Pentadecor Basic Line (BL) and Pentadecor Matte Line (ML) finishes were tested for compatibility with the list of products below using test method NEMA LD3 section 3.4. The Pentadecor BL and ML surface finishes showed no color change or surface damage when tested using this standard.

Cleaners & Disinfectants

- Bleach 5:1
- Citrace® germicide
